

# BLOCKCHAIN AS A SERVICE

**In an era where integrity, originality and authenticity have become increasingly rare global commodities, trust has been eroded to the point of near-universal scepticism.**

Unless your data can be presented in an indisputable and transparent manner, there is a risk of losing business to doubt and mistrust.

By utilising our de-centralised Blockchain-as-a-Service platform, you can attain credibility when it comes to how you manage and provide access to your critical data, no matter whether your customers are motivated by provenance, compliance, sustainability, or innovation.

All of this can be achieved without the need for manually developing your own Blockchain. We will use our expertise to simply map your existing processes into a digital value chain and ensure the integrity of your data is protected.

Speak to us today about how we can help you differentiate your products and services to ensure you inspire confidence in a world that is continually challenged by lack of trust.

## WHAT YOU GET

- Access to our software platform that seamlessly aligns to your internal systems and processes
- Options for automated data integration using IoT sensors or manual input - your choice
- An analytics dashboard to view live data, and reporting tools for a broad range of stakeholders
- Flexibility to read and write data to a de-centralised blockchain, according to your specific circumstances and requirements
- Closed and secure end-to-end audit trail and storybook with enormous potential for true transparency

### Trust

Make trust and transparency the foundation of your relationship with your customers and stand out from the crowd

### Compliance

Ensure you demonstrate compliance with necessary regulatory requirements by locking in critical data

### Security

Create an end-to-end audit trail of your complete production process that is fully secure and immutable
